Re-Fund

**When Disaster Strikes,
We Respond.**

$100M+ raised in crypto for Ukraine – but where did it go?

Problems

Why Disaster Relief is Broken Today

1 **Bureaucratic delays = slow aid**
Victims often wait days or weeks before funds are unlocked and distributed.

2 **Donors lack transparency**
Most donors never see how or where their money is actually used.

3 **Cross-border friction + corruption**
Without clear tracking, even massive donations risk becoming black boxes.

Our Solution

Re-Fund

When Disaster Strikes, We Respond.

1 ## Community-Governed Fund

Blockchain-based DAO pools global donations into a transparent, on-chain treasury.
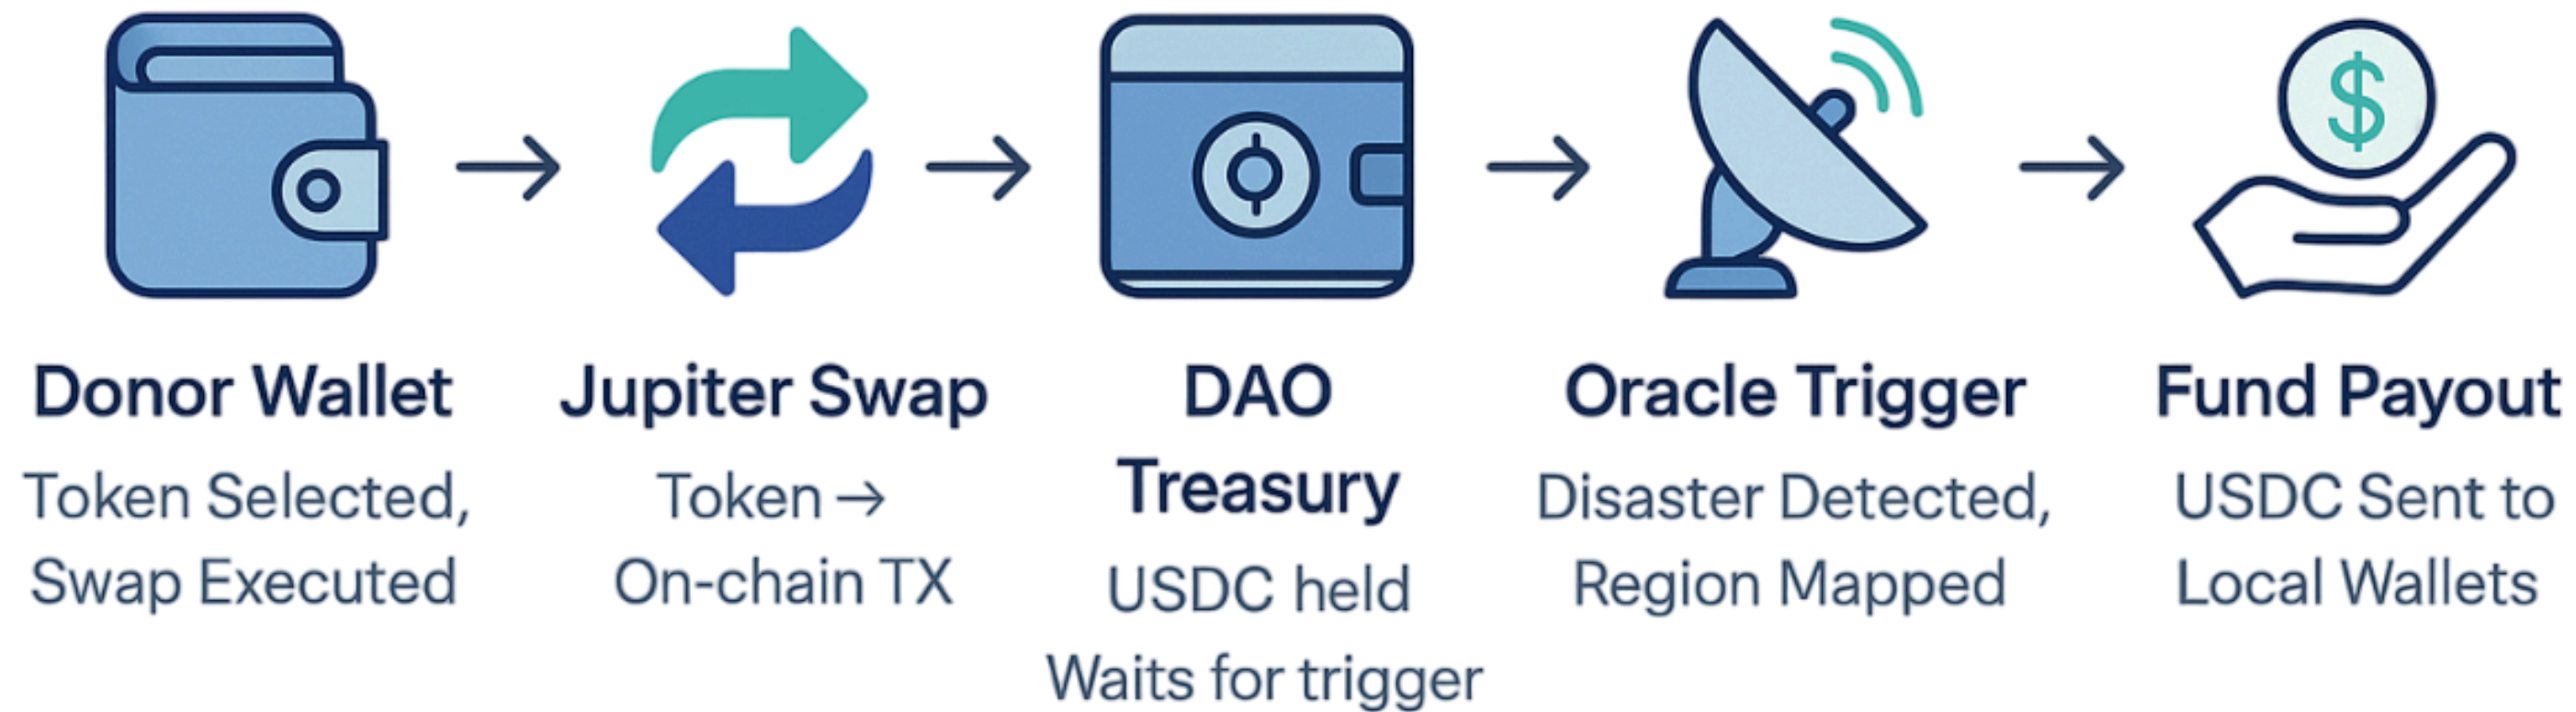

2 ## Transparent & Accountable

Immutable ledger tracks every donation and payout, reducing fraud and building trust.

3 ## Powered by DeFi

Integrates Jupiter on Solana to convert any token to stablecoin (USDC), maximizing value and accessibility.

Architecture

Donor Wallet
Token Selected,
Swap Executed

Jupiter Swap
Token →
On-chain TX

DAO Treasury
USDC held
Waits for trigger

Oracle Trigger
Disaster Detected,
Region Mapped

Fund Payout
USDC Sent to
Local Wallets

DEMO

Results & Potential

- Donations in any currency → converted at best rates
- Funds sent in seconds after disaster → no approvals
- Transparent, auditable, decentralized

Future:
- Chainlink oracles
- DAO voting/governance
- NGO partnerships for real-world deployment

THANK YOU
